

Experimental Aircraft owners can now purchase direct from L3 Aviation Products. The LynxDirect program is exclusively available to experimental owners who are self-installing their avionics. LynxDirect systems are available through two sales paths:

1. Over-the-counter from L3 authorized dealers (contact dealer for pricing)
2. Directly from L3 Aviation Products (M.S.R.P. Requires Make/Model of experimental airframe)

The LynxDirect systems include all required documentation and software to enable the experimental aircraft owner to self-install their Lynx system just as they would other avionics.

Below is a typical LynxDirect order through L3 including contents and cost:

### Lynx NGT-9000 Transponder / Display Base System

**\$6,170**

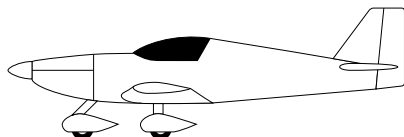

Mode S ES touchscreen transponder that displays ADS-B traffic and weather on itself as well as other compatible panel-mounted displays. Includes Wi-Fi module for connectivity to tablet flight apps. All Lynx models incorporate an embedded WAAS/GPS.
